Congenital hypoplasia or aplasia of carpal scaphoid bone without other abnormality is a rare disorder. We experience a case of congenital hypoplasia of carpal scaphoid bone without other abnormality.

Key Words: Scaphoid, Congenital hypoplasia

(Fig. 1).

(Fig. 2).

¹⁻⁹⁾ Davison¹⁾

Fig. 1. Gross photograph of both hand. Right side thenar muscle atrophy was noted.

Fig. 2. A and B Both hand anteroposterior radiography(**A**) and right wrist anteroposterior radiography(**B**). Remnant of scaphoid was fused on radial styloid process. Alignment of trapezium and trapezoid was straight along thumb ray and radial deviation of distal carpal row was noted.
